WELCOME TO THE SPZ!

Parents of developmentally delayed children, children at risk of developing a disability or of disabled children often find it very hard to accept or to be told that something is “not okay” with their child. It is often a long process until they get the best possible support for their child.

Our clinic is a doctor-run medical-therapeutic institution. We offer diagnoses and therapies for children and youth with developmental disorders and potential or manifested disabilities. Our wide range of therapists cooperate in an interdisciplinary team.

If being legally eligible for early intervention support, children who are developmentally delayed are supported in their development. The necessary medical / therapeutic measures are offered at the clinic and / or nursery in consultation with the parents.

A referral by the attending pediatrician or GP is required to receive care in the SPZ.

OUR TARGET GROUPS

Our clinic supports children from 0 – 18 years of age with the following problems:

- Premature and new born babies with potential or manifested developmental retardation
- Early regulatory disorders
- Specific developmental disorders of motor activity, speech and language, cognition and learning
- Neurologic and muscular disorders
- Mental and physical disabilities
- Social and emotional behavioral disorders
- Bonding and relationship disorders
- Epilepsy
- Chronic diseases, genetic syndromes

REGISTRATION

Please refer to your pediatrician or GP first before consulting us. They will advise you and issue a letter of referral, if necessary. You will receive a registration form from us so that we can assess how urgent your case is and can plan the process of initial treatment.

What we would like from you:

- Willingness to collaboratively search for solutions
- Openness for trying out new approaches and integrating them in your family's daily life
- Motivation to cooperate with us: Contribute your expert knowledge as parents to the treatment and consultation process
- Time and patience to ensure proper solutions and approaches can develop and establish their value
- If you happen to be dissatisfied we appreciate your willingness to openly express your criticism to us

A letter of referral at the beginning of each treatment quarter is a must.
